

ArkLaTex Academy of general dentistry

Lecture: Friday, March 21, 2025

Course Title: “Restoring Complex Full Mouth Restorative and Esthetic Cases: Tricks, Timing and Technology”

Presenters: Bruce J. Crispin DDS, MS, Chad Crispin

Course synopsis:

Dental presentations often try to focus on the presentation and not on the content. This presentation is designed for practicing dentists that struggle with problems that are esthetic driven or how to organize and treat complex full mouth reconstructions. Initially this lecture program will present techniques and materials used to solve demanding esthetic challenges. Secondly, we will show how to simplify and organize full mouth reconstruction cases so any dentist can master the techniques with confidence. Finally, the application of technology will be presented. How and when to integrate technology into a practice is a challenging and sometimes daunting task. The final part of this presentation will provide information on the latest technology, including 3D printing, milling, CBCT, Intra-oral scanning, and software. How these tools can increase production while providing a predictable, better product for your patients in house is easier than you think.
